Group model report

1. Group variables:

```
biomarkers =
['sysbp','diabp','pulse','wbc','mcv','plt','bun','glu','crea','cho','tg','hdl','ldl','crp','hbalc','ua','
htc','hgb','cysc']

chronic disease =
['hibpe','diabe','cancre','lunge','hearte','stroke','psyche','arthre','dyslipe','livere','kidneye','
digeste','asthmae','memrye']

self-reported functional limitation =
['dressa','batha','eata','beda','toilta','urina','moneya','medsa','shopa','mealsa','housewka','j
oga','walk1kma','walk100a','chaira','climsa','stoopa','lifta','dimea','armsa']

cognition/depression = ['cesd10','shlta','slfmem','imrc','dlrc','ser7','orient','draw']
#exclude tr20
```

2. Variable types:

			Data 1	Гуре			hdl		lumeric		stro	stroke	stroke Cat	stroke Catego	stroke Categoric	stroke Categorical

	haira	Categ				raw	Catego									
		- 3			u	avv	oalege	noul								

With 2 ordinal variables:

'shlta' : ['Very Poor','Poor','Fair','Good','Very good'];

'slfmem': ['Poor','Fair','Good','Very Good','Excellent']

3. Data filtering

2011+2015 with no age missing & 40<=age<=85, sample_size=19695

Missing rate:

cysc ~13.1%

dlrc ~ 7.2%

imrc ~6.9%

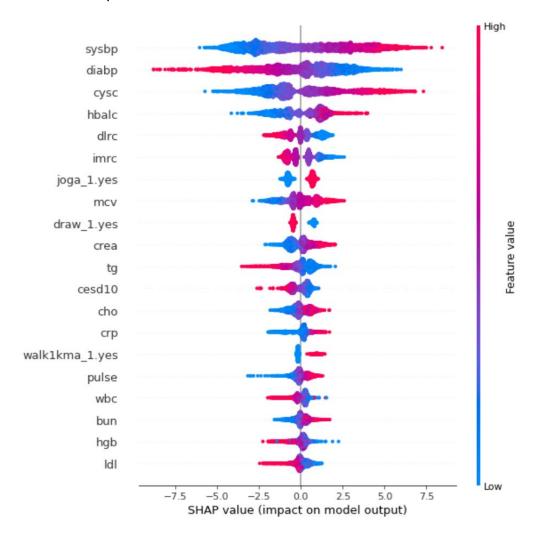

After drop nan value from cysc, dlrc, imrc, sample_size = 15834

4. Output

R^2: bio->0.3844 => all->0.44

	MAE	MSE	RMSE	R2	RMSLE	MAPE
0	5.2951	43.7383	6.6135	0.4501	0.1085	0.0896
1	5.4813	46.9082	6.8490	0.4523	0.1119	0.0922
2	5.5422	48.2022	6.9428	0.4465	0.1114	0.0913
3	5.5566	48.1986	6.9425	0.4195	0.1126	0.0930
4	5.6539	49.5082	7.0362	0.3834	0.1142	0.0946
5	5.3852	44.6713	6.6837	0.4644	0.1078	0.0893
6	5.3986	44.6716	6.6837	0.3960	0.1097	0.0916
7	5.4323	45.2677	6.7281	0.4371	0.1092	0.0909
8	5.2905	42.7327	6.5370	0.4695	0.1059	0.0878
9	5.1904	42.6476	6.5305	0.4814	0.1068	0.0871
Mean	5.4226	45.6546	6.7547	0.4400	0.1098	0.0907
SD	0.1337	2.2961	0.1695	0.0301	0.0025	0.0022

5. Feature importance

6. Model re-train with top feature-importance features

MAE	MSE	RMSE	R2	RMSLE	MAPE
5.5612	48.0171	6.9274	0.4348	0.1130	0.0935

Compare to model with all variables:

MAE	MSE	RMSE	R2	RMSLE	MAPE
5.4226	45.6546	6.7547	0.4400	0.1098	0.0907

Change of $R^2 = 0.01$, which indicates that features we choose can almost represent all the predict information of all the variables in the original model.

Features to focus:

['sysbp', 'diabp', 'cysc', 'hbalc', 'dlrc', 'imrc', 'joga', 'mcv', 'draw', 'crea', 'tg', 'cesd10', 'cho', 'crp', 'wa lk1kma', 'pulse', 'wbc', 'bun', 'hgb', 'ldl']

Abs(pred - age) <=5, on 2011 dataset: 4179(<=5),2465(>5), 62.9%

Abs(pred - age) <=10, on 2011 dataset: 6093(<=5),551(>5), 91.7%
